# ABDUL QADIR SHER GULAB

DevOps / Site Reliability Engineer

Dubai, UAE · +971 58 802 8136 · abdulqadirk1998@gmail.com

linkedin.com/in/aqsg · github.com/Abdulqadir579

Visa Status: Own UAE Residence Visa (self-sponsored — no employer sponsorship or NOC required)

## PROFESSIONAL SUMMARY

DevOps / Site Reliability Engineer with 4 years of production experience across AWS EKS, GCP GKE, and end-to-end CI/CD automation. Built and operated observability, alerting, and incident-response tooling for cloud-native and Web3 platforms serving 10,000+ concurrent users. Track record of cutting MTTR by 80%, deployment time by 80%, and off-peak compute spend by ~50%. AWS Solutions Architect Associate certified; CKA in progress.

## TECHNICAL SKILLS

**Cloud:** AWS (EKS, EC2, ECR, RDS/Aurora, S3, CloudFront, ALB, WAF, ACM, SSM, KMS, Secrets Manager, Route 53, VPC, IAM/OIDC, Lambda, CodePipeline, Glue, Athena) · GCP (GKE, Cloud Run, Compute Engine, Cloud SQL, Cloud Storage) · Azure (AKS, Pipelines, Managed Identities, Key Vault, Databricks)

**Containers & Orchestration:** Kubernetes · Docker · Helm · ArgoCD · HPA · Cluster Autoscaler · IRSA · Kustomize

**Infrastructure as Code:** Terraform · AWS CloudFormation · Helm charts · GitOps workflows

**CI/CD:** GitHub Actions · Jenkins · GitLab CI · AWS CodePipeline · OIDC Federation · Self-hosted Runners · Docker BuildKit · Blue-Green & Rolling Deployments

**Observability & SRE:** Prometheus · Grafana · Loki · Promtail · Alertmanager · Blackbox Exporter · Zabbix · Splunk · SLO/SLI definition · Error budgets · Incident response · On-call alert routing · Postmortems · Runbooks · Distributed tracing

**Security & Compliance:** AWS WAF · GuardDuty · Trivy · SonarQube · DefectDojo · OWASP Dependency-Check · Gitleaks · Gosec · JumpServer PAM · HashiCorp Vault · CyberArk · mTLS · VAPT remediation · Dependabot

**Operating Systems & Scripting:** Linux (Ubuntu, Amazon Linux, RHEL) · Bash · Python · systemd · Networking & DNS troubleshooting

**Databases:** MySQL · Aurora MySQL · PostgreSQL · MongoDB · Redis

## PROFESSIONAL EXPERIENCE

### Site Reliability Engineer | Token13 Software LLC

*Dubai, UAE · May 2025 – Present*

- Built a full observability and alerting stack from scratch on EKS — Prometheus, Grafana, Loki, Promtail, Blackbox Exporter, and Alertmanager with on-call routing to Lark and Slack — **reducing MTTR by 80%** through real-time alerting and structured log querying.
- Owned end-to-end Kubernetes (EKS) cluster operations across two AWS regions: Helm deployments, rolling updates, zero-downtime rollbacks, and IRSA/OIDC workload identity. Tuned Cluster Autoscaler and HPA policies to **cut off-peak compute spend by ~50%** with no impact on peak availability.
- Raised the internal security posture score from **43% to 92%** by embedding GuardDuty, Trivy container scanning, OWASP Dependency-Check, SonarQube, and DefectDojo into every CI/CD pipeline and enforcing security gates on all pull requests.
- Built GitHub Actions CI/CD pipelines automating build, test, and deploy for **7+ Go microservices** across dev and production EKS environments, **reducing deployment time by 80%**.
- Deployed and operated a merchant crypto payment platform on EKS handling **10,000+ concurrent users**, backed by Aurora RDS, AWS WAF, CloudFront, and Loki-based audit logging.
- Eliminated shared credentials org-wide by deploying JumpServer PAM as a single auditable entry point to EKS, RDS, and Redis, provisioning individual accounts across 4 teams (QA, Backend, DevOps, Product). Migrated all server access to AWS SSM Session Manager, **removing open SSH ports entirely**.
- Hosted and secured production frontend properties (tokenb.com, token-13.com, token13.net) via CloudFront and S3 with ACM certificates and WAF rules.

### DevOps Engineer | Skill Space Technology LLC

*Dubai, UAE · May 2024 – May 2025*

- As the **sole DevOps engineer**, built the entire CI/CD platform from scratch — manually deployed and configured a self-hosted GitLab instance on-premise under network restrictions, then built Jenkins pipelines for 8 Dockerized services across dev, staging, and production, **cutting deployment time from ~15 minutes to under 4 minutes per service**.
- Provisioned and managed all AWS infrastructure with **Terraform** for a B2B crypto payment platform processing USDT/USDC across EVM (Ethereum, TRON) and non-EVM (Solana) chains.

- Implemented Apollo Configuration Management across 3 environments, enabling real-time config updates for 8 services **without service restarts** — eliminating downtime for configuration changes.
- Hardened pipeline security with container image scanning and centralised secrets management, ensuring **zero credential exposure** across all CI/CD workflows.

**DevOps Engineer** | **Dastgyr Technologies (Y Combinator-backed)**
*Karachi, Pakistan · Aug 2022 – May 2024*

- Migrated CI/CD for **15+ microservices** from Jenkins to GitHub Actions, **reducing build times from ~20 minutes to under 5** while decommissioning the EC2 Jenkins server and its associated cost. Established Git as the single source of truth for all deployment workflows.
- Designed and operated AWS infrastructure for 3 production mobile apps (Driver, Retailer, Seller) and 15+ backend microservices in Python, Node.js, and .NET. Configured autoscaling policies delivering **zero downtime during traffic spikes** and measurable off-peak cost reduction.
- Stood up Zabbix monitoring from scratch with Slack alerting and **team-specific notification routing**, so 15+ engineers across backend, mobile, and ops were paged only for services they owned — significantly reducing alert fatigue.

## SELECTED PROJECTS

**TokenB Non-Custodial Crypto Wallet** — Live on the App Store and Google Play

- Built and operated the full EKS infrastructure and GitHub Actions CI/CD for a production non-custodial wallet supporting multi-chain token swaps, live market data for 100+ assets, a DApps browser, and EVM/non-EVM chain support. **Stack:** Kubernetes, Helm, AWS, Prometheus, Grafana.

**Kubernetes the Hard Way — Self-Directed Build** — github.com/Abdulqadir579/kubernetes-my-way

- Bootstrapped a Kubernetes control plane from first principles on Linux VMs — certificate authority, etcd cluster, kubelet/kube-proxy, and CNI networking — documenting each phase with a comparison of what managed EKS abstracts away.

**AWS Data Lakehouse — Self-Directed Build**

- Built a production-style data Lakehouse on AWS mirroring a banking data-platform stack, using S3, AWS Glue, and Athena for ingestion, cataloguing, and query.

## CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate**
- **AWS Certified Cloud Practitioner**
- **Certified Kubernetes Administrator (CKA)** — In progress, target September 2026

## EDUCATION

**BS in Computer Science (Software Engineering)** — SZABIST University, Karachi, Pakistan · Oct 2021 · GPA 3.0
Bright Scholarship recipient.
